Dade, 1620.

A Prognostication

In which you may be-
hold the state of this
yeere of our Lord
God. 1620.

Being the Lespe yeare.

Made and set forth by *Wil-*
liam Dade Gent: Practiti-
oner in Physicke.

Imprinted at London, for
the Company of Sta-
tioners. 1620.

**A necessarie and perfect Rule, to know the
beginning and ending of euery Tearme,
with their Returnes.**

Hillarie Tearme begetteth the xxiij. of Ianuarie,
(if it be not Sunday) which so being, it is then deter-
red vntill the next day following: And endeth the xij.
of february; which Tearme hath foure Returnes, viz.

- | | |
|------------------------|----------------------|
| 1. Octabis Hillarie. } | 3. Crasti Purifica. |
| 2. Quind. Hillarie } | 4. Octabis Purifica. |

Easter Tearme begetteth xviij. dayes after Easter,
and endeth the next Monday after Ascension day: and
hath siue Returnes; that is to say,

- | | | |
|---------------------|----------------------|------------------|
| 1. Quind. Pasche. } | 3. Menſe Paſche. } | 4. Quing; Paſche |
| 2. Tres Paſche. } | 5. Crasti. Aſcention | |

Trinitie Terme begetteth on the Friday next after
Trinitie Sunday: and endeth the Wednesday foure-
night after: and hath foure Returnes; that is to say,

- | | |
|--------------------------|-----------------------|
| 1. Crasti. Trinitatis } | 3. Quind. Trinitatis. |
| 2. Octabis Trinitatis. } | 4. Tres Trinitatis. |

Michaëlas Tearme begetteth the ninth day of
October, (if it be not Sunday) and endeth the xviij.
of November: and hath eight Returnes; viz.

- | | |
|----------------------|----------------------|
| 1. Octabis Michael } | 5. Crast. Aemmarum. |
| 2. Quind. Michael } | 6. Crastino Martini. |
| 3. Tres Michael. } | 7. Octabis Martini. |
| 4. Menſe Michael. } | 8. Quind. Martini. |

Note also that the Exchequer openeth eight dayes
before any terme begin (except Trinitie Tearme;) in
which it openeth but foure dayes before.

A Description of the foure Quarters of the yeere.

And first of Winter.

☉ is ♍, ♋, ♎.

THe Winter Quarter Astronomicall for this
yeare of our Lord God, 1620. began vpon
the xij. day of December, 1619. when the Sun
did enter into the first minute of *Capricorne*, and
doth continue vntill the x. day of March, then
next ensuing; for then the Sun entereth into
Aries, making the first *Equinoctium*, and begin-
neth the Quarter called the Spring. This Sea-
son of his proper nature is cold and moyst, and
of complexion *Flegmaticke*, good for whole
and sound people, but dangerous to those that
are sicke and diseased: In this Quarter of the
yeare the inward parts of Man are very hotte,
and being healthfull they may receiue great
plentie of food, because naturall heate is now
comforted, for it is driuen inwards and there in-
creased, and maketh the digestion more strong.

The disposition of this Quarter is like to be
variable and very inconstant; for sometimes
there is like to be great winds and raines, with
very cloudie and obscure dayes; but farther
iudgement is to be scene in the dayly inclination
of the weather in the Monthes following.

B 2

The

A Prognostication.

The diseases likely to happen this Quarter are these or the like; Rheumes, palsies, Goutes, Poles, sore eyes, griete in the loyns, wormes in mawe, paine in the brest and Lungs, &c.

Of the second Quarter of the yeere called the Spring.

○. in V, 8. II.

THe Spring time being the second part of the yeere Astronomicall, taketh his beginning the x. of March when the Sunne entrech into the fi. st minute of *Aries*, the *Equinoctiall* point, making the dayes and nights of an equall length; This Spring Quarter continueth vntill the xij. of Iune following; when the Sunne enters into the Signe *Cancer*.

This season is not naturally hot and moist, and is of complexion Sanguine, being the most temperate and healthfull time of the yeere, yet bringeth it, or rather sheweth foorth) many diseases, not engendering them by excelle, but discovering them which were inwardly bred by the distemperature of other times; yet it is the most conuenient season for to expell diseases that haue beene of any long continuance.

The

The sicknesses most incident to this season, are, Measels, small Poxe, Agues, Chollicke and Stone. burning feauers, &c.

Touching the state and temperature of the weather may further be seene in the daily disposition of the season.

Of the third part of the yeere called Sommer.

☉ in ♋, ♌, ♍.

Sommer. (accounted the third part of the *Syeere*, *Astronomicall*,) being naturally hot and dry, and of the Cholerick Complexion, doth begin at the Sunnes entrance into the first minute of *Cancer*, which will be this yeere on the xij. day of Iune, where hee maketh the *Solistium estinnum*, and hath his greatest declination to the North from the *Equinoctiall*: Now are the dayes longest, and the nights shortest, and Sommer doth continue vntill the xi. j. day of September.

The body of man cannot digest such hard meates as it may in the winter season, for the naturall heate is now distributed vnto the exterior parts, and man is not so hot within as in winter.

The sicknesses of this season generally are hot

A Prognostication.

Feuers, Tertians, continuall Agues, vomits, inflammation of the Lungs, shortnesse of breath, diminesse of sight, Pallies, soresnes of the mouth and throate, &c.

As for the estate of the weather you may see in the daily inclination.

Of the fourth part of the yeere called, Autumne, or Haruest.

☉ in ♍, ♎, ♏.

HAruest, or Autumne, being the forth and last part or quarter of this yeere (with the Astronomers) being naturally cold and dry, and of the melancholly complexion, beginneth on the xiiij. of September, when the Sunne forsaketh the last scruple of *Virgo*, and then he entreth into the first minute of *Libra*, where hee then maketh the Equinoctiall *Hyemall*, working the same effect that he did at his going into *Aries*, that is, making the daies againe of an equal length to the nights, he rising at six in the morning, and setting at six at night.

Of all the other quarters this is the most unhollesomest, for it is more subiect to sicknesses then any of the other, for the dregs of all the diseases

Dade. 1620.

cases of the former part of the yeere will now burst forth and shew it selfe.

The sickneses of this quarter are many and dangerous, black Iauanders, Dropsies, Consumptions, Megrims, falling Sickneses, Pyles, Emrods, Spleene, and the like.

As for the weather iudgement you may see it in the daily disposition.

A briefe Description how the fuen Planets are placed aboue the Earth in the Skie, or vnder the Earth, for every month after Sun setting; by which you may perceiue how they keepe their motion night and day, all the yeere. Moreouer, the good dayes of Sympathy touching mans Complexion and Body, in cau'es of administration of Physicke, or such like: and also, the Euill dayes (according to the malevolent aspects of the Planets) in which it is dangerous to let Bloud, take Vomites, Purgations, Sweates, or such like attempts.

Of Ianuary.

{ Saturne is west-ward at Sun setting.
Jupiter is nere mid-heauen at Sun rise.
Mars is in the East before Sun rise.
Venus & Mercurie both rise before the Sun. }

The first daye faste.

The first Quarter on Sunday, the 17. day. 29.
